Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is US Publication No. 2004/0054630 to Ginter et al.

Ginter et al. disclose the process of delivering secure containers to computer users of a distribution environment. The container including content, permission record, budgets and other methods, wherein the permission record comprises "a control set, which contains a list of methods that must be used to exercise a specific right". Ginter et al. teach the process where "users of content can select from among a set of predefined methods to control containers", which implies that a particular rights management and protection method is identified. However, Ginter et al. taken either individual or in combination with other prior art of record fails to teach or suggest when the one or more electronic processing devices is not operable to perform the identified rights management and processing method, a) using the processing ability of the one or more electronic processing devices to automatically alter the one or more electronic processing devices to be operable to perform the identified rights management and processing method and b) using the received rights indicia by the altered one or more electronic processing devices to perform rights processing of the received content in accordance with the identified rights management and protection method to permit or deny access to the received content as recited in independent claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US Patent No. 6728884 to Lim discloses integrating heterogeneous authentication and authorization mechanisms into an application access control system.
